Zyotowski, Ignacy and Wróblewska, Maria

TITLE:

Simplified determination of deuterium in water by the falling drop method

PERIODICAL:

Nukleonika, v. 7, no. 12, 1962, 775-787

TEXT:

A modification of the falling drop method is described, which eliminates the laborious preparation of calibration curves. The apparatus consisted of (1) a micropipette delivering drops $\sim 3.5 \text{ mm}^3$ in volume; (2) a vessel containing the organic liquid (diphenylmethane for 6-27 mol.% D, and chlorobenzene-xylene mixtures for 0-6 and 27-100 mol.% D). The compositions were adjusted to give a falling time of ≤ 14 sec for the densest drops in the given D-concentration range; (3) an ultrathermostat maintaining the temperature to $\pm 0.002^\circ\text{C}$; (4) an apparatus for the normalization of the isotopic composition of oxygen in water. The apparatus was calibrated with standard samples made up of D_2O (containing 99.7 mol % D) and purified water, and a calibration curve was plotted between

7 experimental points, each being an average of 30 determinations. Such a calibration curve is best described by an empirical relation:

$$d = \alpha \left(\frac{1}{t} - \beta \right)^n \quad (1)$$

where d is the density of the falling drop, t is the time in which the drop traverses a known distance, and α , β , n are constants for a given set of conditions. Three measurements of d and t should thus be sufficient to determine β (graphically) and hence α and n. This was confirmed experimentally. For most cases the error \pm 2.5%. There are 2 figures and 12 tables.

TITLE: Investigation of the hydrogen rearrangement in the benzoic acid by using tritium

SOURCE: Nukleonika, v. 10, no. 12, 1965, 777-781

TOPIC TAGS: radiation chemistry, tracer study, tritium

ABSTRACT: The purpose of this work was to study the possibility of the hydrogen rearrangement in the benzoic acid. Radioactive tritium had been used as a labelling atom. The experiments performed at 200°C during 72 and 240 hours showed that rearrangement does not take place in these experimental conditions. Orig. art. has: 1 table. 1855. OCHRONOSIS ALKAPTONURICA - Ochronosis alkaptonurica - Leszczyński S. and Wróblewska T. Zakł. Radiol. a Inst. Reumatol., Warszawa - POL. PRZEGL. RADIOL., 1958, 22/1 (3-12) Illus. 2

After a discussion of the biochemistry and pathogenesis of ochronosis a case is reported. In the spine, degenerative changes of the intervertebral discs were observed with narrowing of the intervertebral spaces and hypertrophic bone changes. The spondylarthritic changes were most pronounced in the lumbar area, and there was a slight lumbar scoliosis. The sacroiliac joints showed only insignificant lesions. The most advanced lesions were in the knee joints with reduction of the interosseous space, eburnation of the epiphyses, loose bodies in the joint and linear calcifications above the medial epicondyle of the femur.

"Preliminary Seroepidemiologic Studies on Arboviruses in Selected Occupational Groups of the Healthy Population"

Warsaw, Przegląd Epidemiologiczny, Vol 20, No 3, 1966, pp 250-254.

Abstract: A serologic study using the hemagglutination test was carried out for arboviruses in the sera from 530 forestry workers and 464 agricultural workers from Lublin, Olsztyn, Bydgoszcz and Koszalin Wojewodstws. The regional distribution of tick-borne encephalitis suggests there may exist natural foci of this infection.

Title : Paraphase Corrosion Retarders

Orig Pub : Gaz, Woda i techn. sanit., 1958, 32, No 8, 302-303

Abstract : A corrosion protection method employing paraphase
corrosion retarders (CR) is described. n-Amidodiphenyl
(I) is one of such CR. It is obtained as follows:
vapors of C_6H_6 are introduced into a furnace and heated
to a "cherry-rod" temperature, with a conversion to
diphenyl (II) and H_2 thus occasioned. The unreacted C_6H_6
together with the volatile II are recycled after cooling.
After 10-20 hours of operation II of light yellow color
is obtained. It is then reacted with fuming HNO_3 and

glacial CH_3COOH and converted into n-nitrodiphenyl. Sub-
sequently, with the aid of SnCl_2 the latter is reduced to I.
The conducted experiments demonstrated that I possesses
better protective action in acidic media (88.9% protection)
than it does in neutral media (84.2% protection). --

TITLE: Paste for corrosion protection of metals, particularly underground pipes

PERIODICAL: Referativnyy zhurnal. Khimiya, no. 22, 1962, 309, abstract 22I221 (Polish patent 45439; December 27, 1961)

TEXT: Underground pipelines are protected against corrosion by applying a layer of the following paste to their surface (%): sludge from chrome plating 55, naphthenic acids 5, paraffin 10, machine oil 30. The paste components are mixed at an increased temperature and are applied cold. If the paste layer is broken, the pipeline is protected as a result of rapid leaching of the chromates from the paste under the action of water penetrating below the insulating layer. "Investigations on Arbor Viruses Never Previously Isolated in Poland."

Warsaw, Przegląd Epidemiologiczny, Vol 16, No 3, 62, pp 265-272.

Abstract: [Authors' English summary modified] Serological screening of 1039 healthy persons for the presence of Arbor virus groups A and B antibodies has been carried out by means of the haemagglutination test. Findings for the B group were: tick-borne encephalitis 2.5 percent, explained by the presence of foci in Poland, and 1.09 and 1.3 percent respectively for Japanese B encephalitis and West Nile fever, explained by a cross reaction within the group. Positive findings for the A group (West equine encephalitis) on the order of 2.3 percent suggests the presence in Poland of foci. Investigations to be continued. 4 English and 10 Polish references.

"The Properties of Arbo A Strains of Eastern Equine Encephalomyelitis Type
EEE, Isolated in Poland. Part 1. Serological Analysis of Antigenic Struc-
ture."

Warsaw, Medycyna Doswiadczalna i Mikrobiologia, Vol 18, No 2, 66, pp 147-152

Abstract [author's Russian and English summaries, modified]: Nine strains of
EEE type isolated in Poland were analyzed by hemagglutination test as modified
by Casals. The strains were found to differ in their antigenic spectrum from
the standard strain: the range of the serological reactions specific for the
type was more limited. On the basis of data reported by Casals, who classified
the Polish strain Witkowice into the northern variety of EEE type, two other
strains that reacted with Witkowice immune antiserum were also included in
this variety. Antigenic differences within the type are discussed in relation
to the process of changes in the antigenic phase of the strain. Five Soviet-
bloc and six Western references.

TITLE: The Emission of V^0 -Particles During the Capture of K -Mesons
by Nuclei in a Photoemulsion (Ispuskaniye V^0 -chastits pri
zakhvate K -mezonov yadrami v fotoemul'sii)

PERIODICAL: Zhurnal eksperimental'noy i teoreticheskoy fiziki, 1958,
Vol. 34, Nr 4, pp. 1028 - 1030 (USSR)

ABSTRACT: A stack of Ilford G-5 emulsion, each having a thickness of
600 μ , was irradiated with K -mesons with momenta of about
300 MeV/c in the bevatron at Berkeley. An examination of
the stack disclosed about 3 cases of a decay of Λ^0 -particles
in the immediate vicinity of σ_K -stars (Refs 1, 2, 3). In
this connection the authors endeavored to find a correlation
between the process of production and the decay of the
 Λ^0 -particle when they are not within the same range of
vision of the microscope. The process of microscopical in-
spection is described. The σ_K -stars, the two-membered stars

and all traces longer than 500 μ of single protons, which began within the emulsion layer were recorded. In this way 18 cases of the decay of Λ^0 -particles were found. The authors give a short report on their search for the production processes. The production processes were found for 13 Λ^0 -particles. The results of the measurements are compiled in a table. In 5 cases no producing σ_k -stars were observed. The corresponding Λ^0 -particle could have formed in such a nuclear spallation caused beyond the checked range by a K-meson which had not come to a stop. Also other possible explanations for the failure to find the producing σ_k -star are mentioned. The comparison of the decays of Λ^0 -particles with the producing processes can be useful for the investigations of different nuclear reactions accompanying the production of Λ^0 -particles as well as for the investigation of the Λ^0 -particles themselves. The authors thank Ye. Gerule, Professor M. Danysh and M. I. Podgoretskiy for raising the problem and for valuable advice with respect to this work. There are 1 table and 4 references, 0 of which are Soviet.

Determination of the Mass of the Λ^0 Hyperon \sqrt{s}

PHOTODICAL: *Acta Physica Polonica*, 1960, Vol. 19, No. 5, pp. 277 - 287

TABLE I. The energy of the decay $\Lambda^0 \rightarrow p + \pi^-$ measured in recent years by several groups of investigators using chamber and emulsion techniques. The errors are statistical. In some cases they are large in comparison to the errors quoted. On account of its importance, the authors have tried to determine the mass of Λ^0 based on larger statistics. As a source of Λ^0 hyperons, they chose the K^- meson in muon-emulsion. They used a stack of 760 plates $10 \times 10 \times 0.004$ of Ilford 65 emulsion exposed to the enriched K^+ beam (~ 100 MeV/c) from the Berkeley bevatron. For the emulsion K^+ beam (~ 100 MeV/c) from the Berkeley bevatron. For the emulsion factor of this emulsion, they found the weighted mean of estimates by the independent methods to be $\mu = 2.21 \pm 0.037$. The stopping power of the emulsion was found to be $S_g/E = 1.002 \pm 0.003$.

Card 1/3

All measurements for each day were made under bright magnification independently by 10 observers. Horizontal projections of the tracks were generally made on Zeiss Lucplan microscopes adapted for amateur work. Vertical projections were made on a Zeiss optometer coupled to a Korhola microscope. The projected tracks were observed on the actual picture wire and a number of the tracks were attached to the screen of the Zeiss microscope. The tracks were measured on a Korhola M2 microscope. The assumption that the secondary particles are protons and the Geant program for each event were calculated. In the evaluation of random errors for the individual Q -values, errors in angular momentum, range measurements, straggling, shrinkage factor, and stopping power were taken into account. From their studies of 51 events of A hyperions, the authors obtain the following results for Q values and ΔQ values.

A. V. Yakovlev, A. V. Yakovlev, Yakovlev named as being the scanning staff of the laboratory Mrs. K. Golubina, Mr. R. Dobrichev, Mrs. M. Padomova, Miss Z. Syrtseva for their helpful work, and especially Mrs. I. Pylyshchik for her efficient help in scanning, transcribing, and calculation. There were 2 figures, 2 tables, and

Kolek W., Kubek J., Paszek W., Wróblewski J. The Possibility of Applying Alternator Self-Synchronisation.

„Możliwości stosowania samosynchronizacji generatorów”. Energetyka, No. 4, 1954, pp. 195—199, No. 5, 1954, pp. 238—242, 14 figs.

Methods of switching in synchronous alternators for parallel work, in particular methods of synchronisation and self-synchronisation. Discussion of general phenomena occurring during the switching in of alternators by means of synchronisation. Basic circuits for hand, half and fully automatic alternator control during synchronisation, taking into account methods of alternator slip control in relation to the network. Results are given of introductory measurements taken on turbo-alternators and other synchronous machines with a view to quantitative estimation of the switching operation. The application is discussed of self-synchronisation of alternators driven by back pressure turbine of water generators and synchronous compensators and their influence on the network. An analysis is offered of the criteria of the usefulness of self-synchronisation.

Acute otitis media in infants and children observed in the course of infantile diarrhoeas OTOLARYNG. POL. 1955, 9/2 (153-159)

The author distinguishes - besides ordinary otitis media - latent otitis media and its influenzal, pneumococcal, septic and catarrhal form. In discussing therapeutic management he describes puncture and incision of the membrana tympani, antro-puncture and antrotomy. He presents statistics concerning 117 infants treated in 1952 at the diarrhoeal department of the Children's Clinic of L. Warynski's Silesian Medical Academy in Zabrze and emphasizes the fact of a minimal number of antrotomies (5%). The author then discusses the conservative method of treating otitis media in the course of infantile diarrhoeas by a combined treatment with antibiotics and sulphamides, indicating the outline of the therapy of infantile diarrhoeas according to the methods accepted at the Children's Clinic in Zabrze.
